

My wife and I had a pool installed several years ago at our home in Lakeville. Within one season cracks appeared in the cement patio around the pool. We explored resurfacing with stamped concrete but were not satisfied when we made inquiries with others who had chosen that option. When we decided to use pavers we were surprised and skeptical when Bob told us he would use our cement patio base and install over the existing surface using new foundation leveling material. The result is unbelievable; the new pool coping he installed and the pavers add a whole different dimension to our pool area. We now have a pool patio worthy of a magazine advertisement. The new look is great; the installing crew's professionalism and Bob's promise the landscaping around the work site "will look better than when we started" were both pluses.
